European PGDay
2008

Prato, Italy
October 2008

The Storage

- Network Appliance FAS3140
- Fabric Metro Cluster
- 10 shelves (140 disks total)
- FC, NFS and ISCSI
- Aggregate with 35 Disks for testing

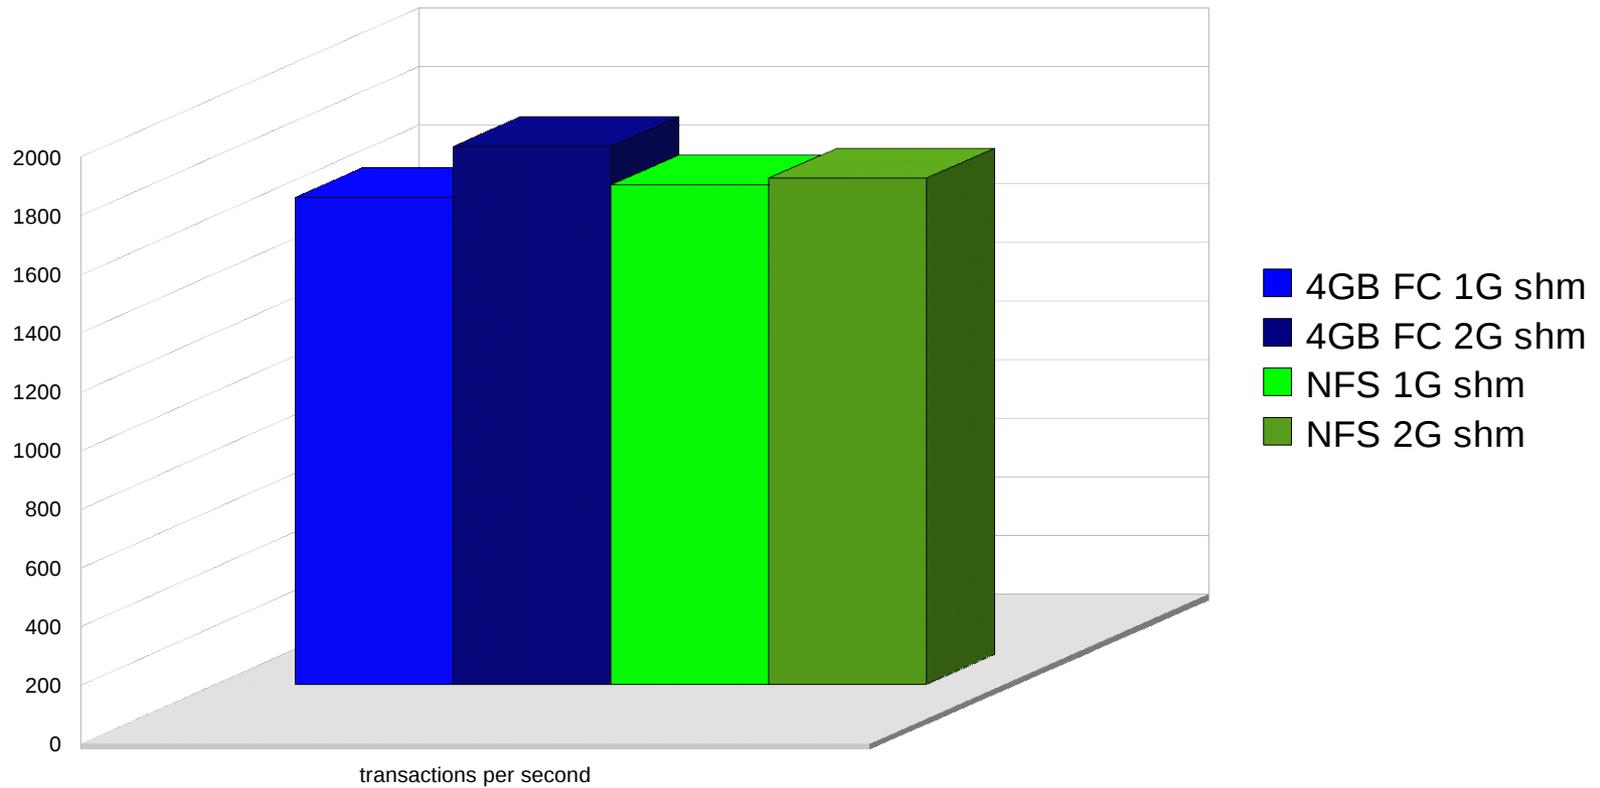

Workload generator

- Dual Quadcore E5430
- 16GB RAM
- 4GB FC, 1GBit Ethernet
- Debian Etch/AMD64 + etchnhalf
- PostgreSQL 8.4(devel) + parallel restore

- pgbench (-s 100 -c 100 -t 100000)
- 70GB dump file (uncompressed)

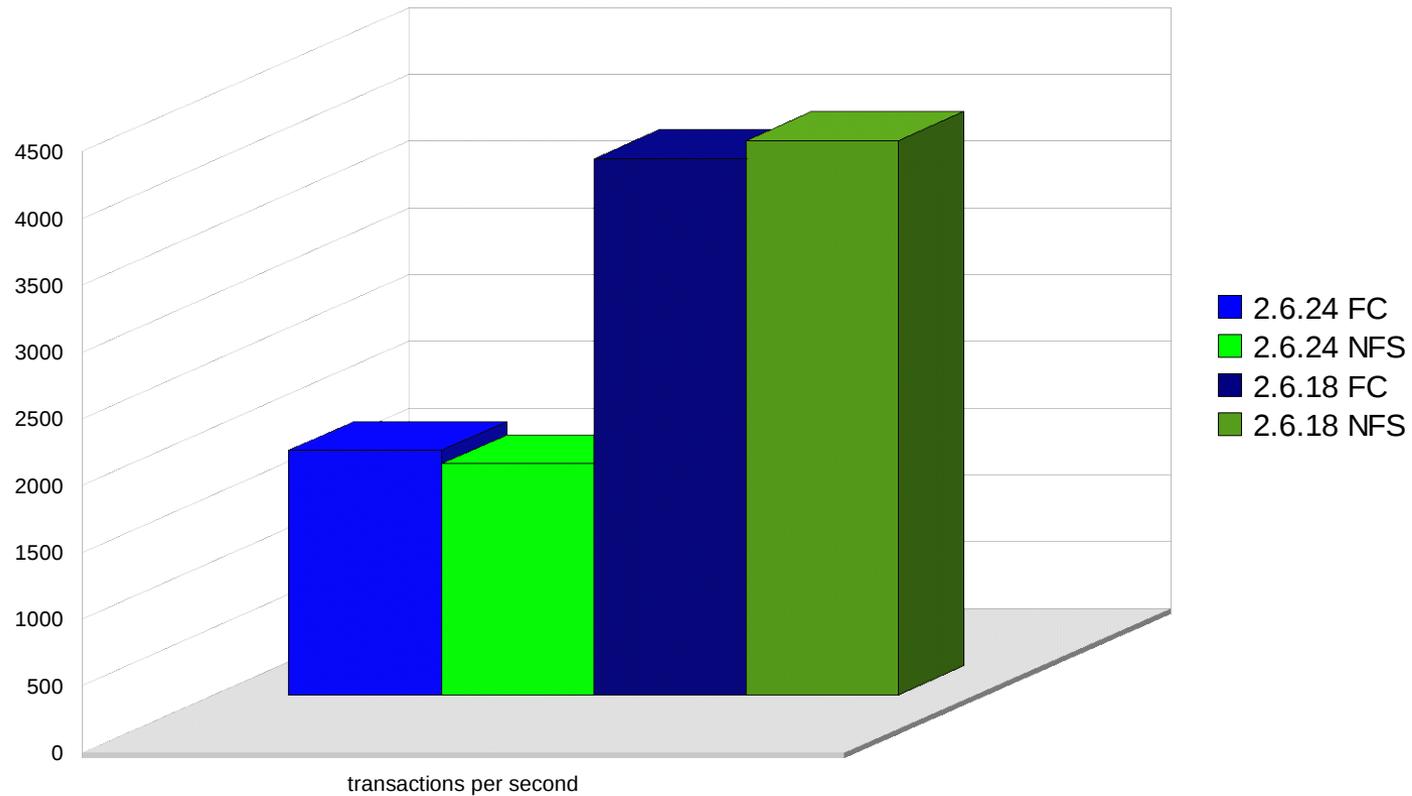

Initial pgbench results

Debian Etch/AMD64 2.6.24

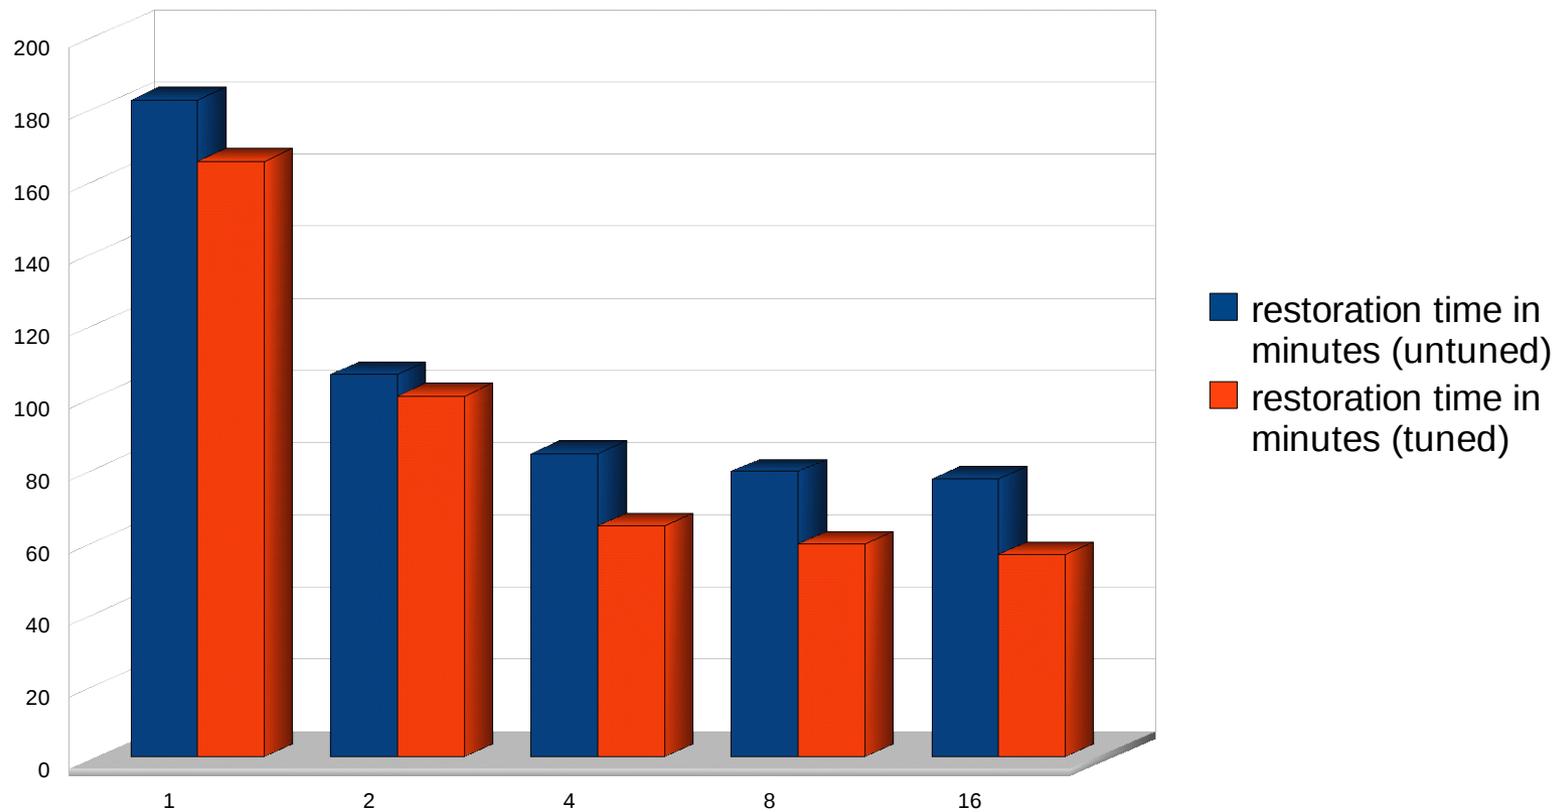

pgbench results

Debian Etch/AMD64 - 2.6.24 vs 2.6.18

Parallel restore results

parallel restore comparison

Summary

- Consider kernel behaviour
- Benchmark setup important
- deadline IO-scheduler
- `qla2xmaxqdepth=256`
- General PostgreSQL tuning applies

Thank you!
