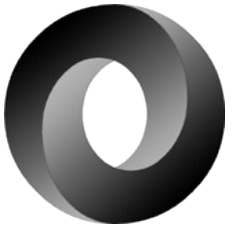
JSON by example

FOSDEM PostgreSQL Devevoper Room
January 2016

Stefanie Janine Stölting
@sjstoelting

JSON



JavaScript Object Notation

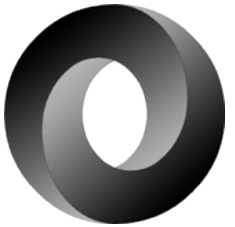
Don't have to care about encoding, it is always Unicode, most implemantations use UTF8

Used for data exchange in web application

Currently two standards RFC 7159 by Douglas Crockford und ECMA-404

PostgreSQL impementation is RFC 7159

JSON Datatypes



JSON

Available since 9.2

BSON

Available as extension on GitHub since 2013

JSONB

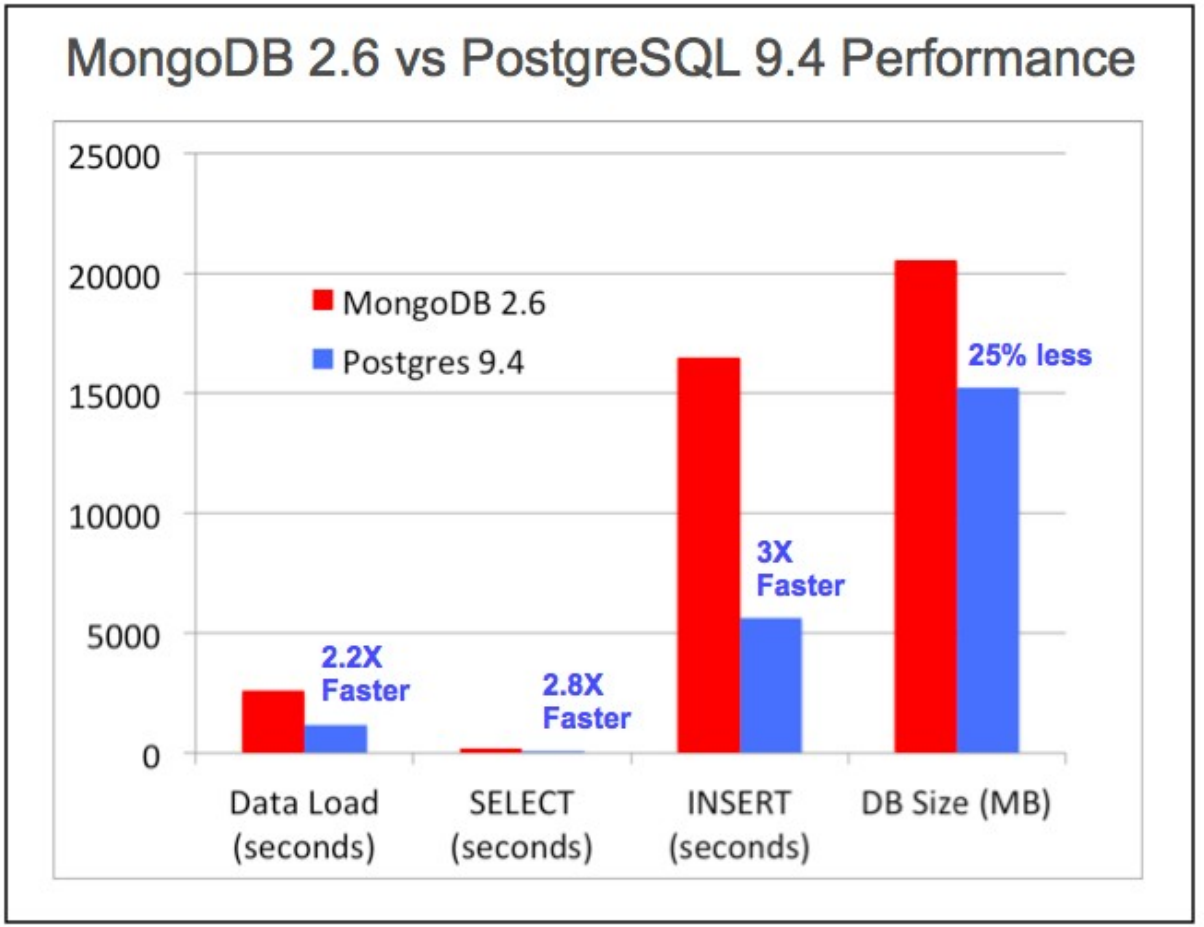
Available since 9.4

Crompessed JSON

Fully transactionoal

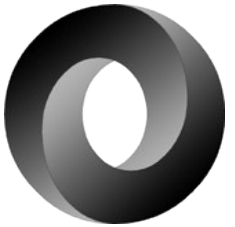
Up to 1 GB (uses TOAST)

Performance



Test done by EnterpriseDB, see the article by Marc Linster

JSON Functions

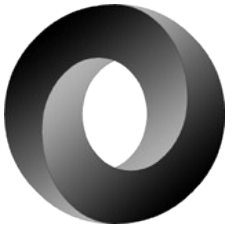


row_to_json({row})
Returns the row as JSON

array_to_json({array})
Returns the array as JSON

jsonb_to_recordset
Returns a recordset from JSONB

JSON Opertators



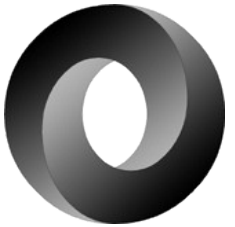
Array element
->{int}

Array element by name
->{text}

Object element
->> {text}

Value at path
#> {text}

Index on JSON



Index JSONB content for faster access with indexes

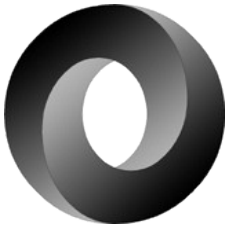
- GIN index overall

```
CREATE INDEX idx_1 ON jsonb.actor USING
GIN (jsondata);
```

- Even unique B-Tree indexes are possible

```
CREATE UNIQUE INDEX actor_id_2 ON
jsonb.actor((CAST(jsondata->>'actor_id' AS
INTEGER)));
```

New JSON functions



PostgreSQL 9.5 new JSONB functions:

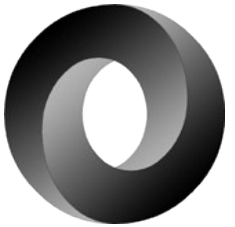
- jsonb_pretty: Formats JSONB human readable
- jsonb_set: Update or add values

PostgreSQL 9.5 new JSONB operators:

- ||: Concatenate two JSONB
- -: Delete key

Available as extions for 9.4 at PGXN: jsonbx

Data sources



The Chinook database is available at chinookdatabase.codeplex.com

Amazon book reviews of 1998 are available at examples.citusdata.com/customer_reviews_nested_1998.json.gz

Chinook Tables

	tablename
1	Artist
2	Invoice
3	Employee
4	Customer
5	Playlist
6	InvoiceLine
7	Album
8	Genre
9	PlaylistTrack
10	MediaType
11	Track

	table_name	column_name	data_type
1	Artist	ArtistId	integer
2	Artist	Name	character varying (120)

	table_name	column_name	data_type
1	Album	AlbumId	integer
2	Album	Title	character varying (160)
3	Album	ArtistId	integer

	table_name	column_name	data_type
1	Track	TrackId	integer
2	Track	Name	character varying (200)
3	Track	AlbumId	integer
4	Track	MediaTypeId	integer
5	Track	GenreId	integer
6	Track	Composer	character varying (220)
7	Track	Milliseconds	integer
8	Track	Bytes	integer
9	Track	UnitPrice	numeric

CTE

Common Table Expressions will be used in examples

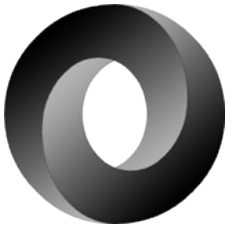
- Example:

```
WITH RECURSIVE t(n) AS (
    VALUES (1)
  UNION ALL
    SELECT n+1 FROM t WHERE n < 100
)
SELECT sum(n), min(n), max(n) FROM t;
```

- Result:

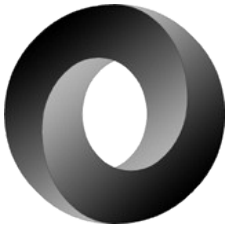
	sum bigint	min integer	max integer
1	5050	1	100

Live Examples



Let's see, how it does work.

Live with Chinook data



```
-- Step 1: Tracks as JSON with the album identifier
WITH tracks AS
    (
        SELECT "AlbumId" AS album_id
            , "TrackId" AS track_id
            , "Name" AS track_name
        FROM "Track"
    )
SELECT row_to_json(tracks) AS tracks
FROM tracks
;
```

	tracks
1	{"album_id":1,"track_id":1,"track_name":"For Those About To Rock (We Salute You)"}
2	{"album_id":2,"track_id":2,"track_name":"Balls to the Wall"}
3	{"album_id":3,"track_id":3,"track_name":"Fast As a Shark"}
4	{"album_id":3,"track_id":4,"track_name":"Restless and Wild"}
5	{"album_id":3,"track_id":5,"track_name":"Princess of the Dawn"}
6	{"album_id":1,"track_id":6,"track_name":"Put The Finger On You"}
7	{"album_id":1,"track_id":7,"track_name":"Let's Get It Up"}
